

AT HEIGHT HAND TOOLS

Tether-ready tools allow you to skip the attachment point and directly connect your lanyard

Klein Tools' Work@Height product line has a growing number of tools that are crafted with a manufactured hole. This hole allows workers to attach a lanyard directly to the tool, bypassing the need to create an attachment point.

Purchase Klein tether-ready Work@Height tools.

Attach an industry-approved tether or lanyard.

Get back to work faster and with ease.

Look for the part numbers ending in TT for the tether-ready version of the tool.
